

Priority	Objectives	Issues:	Method	Controller File	Code Lines	ejs File	Browser View (from)	Browser View (To)
1	Student "borrows" book on the reading list by pushing the book title into the book bag	Mongo \$push function is not working for me, so I resort to using javascript push method but it does not seem to push the book title on the back end, only the front end. So I tried with Jack MacDonald borrowing one book with the js push method. I console logged his book bag and saw the title but when I ran MongoDB it did not show up.	Put method	/controllers/users.js	117-169	views/users/mainStudent.ejs, views/users/bookBag.ejs	/home/main/student/:stuID	/home/main/student/:stuID/books/:bookID/borrow
2	Student can only borrow if book is available, and if the book is in his/her book bag, the borrow button should disappear	conditional statements in the ejs file but does not seem to work when the book is in the book bag and when quantity is 0	javascript if/else/else if functions			views/users/mainStudent.ejs,	/home/main/student/:stuID	
3	Student needs to borrow more than one book	on the second book, the first book "disappeared" from the book bag. Book bag array can						
4	When teacher logs in, the students' name/reading level/ AND their books' title in the book bag array should show up. Right now the teacher sees empty book bag array	currentStudent.book_bag gives an empty array, even though one student "pushed" one title into his book bag. I checked MongoDB and did not see the title in Jack MacDonald's book bag array. When I tried to add	Get Method	controllers/users.js	25-29	views/teacher/mainTeacher.ejs (linked to scripts/main.js file)	/home/main/teacher	
5	Student should be able to press a button to return the book (remove from the book_bag array)	Since MongoDB is showing empty book bag, nothing to pop right now.	Put Method	Route is not set up yet				
6	So when the book title is removed, the title should be pushed into a different array called completed. Both students/teacher should be able to see the completed books on their views.	I am not here yet	Put method
